VAN DEMAN (H) ripens with the Michael's Early. Peter Collier, Director of New York Experimental Station, says: "This is the best extra early variety ever tested at the station grounds. The first picking of three quarts of any variety was picked from this, and it continued in bearing for 21 days, ripening the bulk of its fruits, however, in ten days. The vigor of plants is good, growth stocky, and fruit hid beneath the dark foliage, berries a showy, glossy scarlet, with yellow seeds, firm and tart. I am of the opinion that this variety has a great future." 20 cents per dozen, $1 per 100. BEVERLY (H) a seedling of Miner's Prolific from Massachusetts.
